English

PROJECTS

Voice AI
Primary Frontend Developer
https://github.com/Kwyk25/voice-ai.git
- **Overview of the Project:** Created a voice generator that uses an API to convert text to speech for those who are hard of hearing or learning English (TSS - Text-To-Speech)
- **Description of the Project:** When a prompt is given, there are hundreds of accents and famous voices to select from. The main API allows us to create a voice clip of someone speaking to use their voice in the site. Voice AI also allows users to save and delete saves audio files, login or sign up, and purchase credits to be able to make multiple voices.
- **Technologies Used:** React, React Bootstrap, Tailwind CSS, SupaBase, MD Bootstrap

Flappy Bird Game
Solo Project
https://github.com/Kwyk25/MileStone-1.git
- **Overview of the Project:** Re-creation of the Flappy Bird Game
- **Description of the Project:** The main objective of the game is to move through pipes and not hit the ground. JavaScript was used for the game controls and mechanics including but not limited to falling, hit detection and onclick jump paired with audio effects. The graphics in the game rely on CSS with a focus on animations.
- **Technologies Used:** HTML, CSS, JavaScript

Nails Website
Main Front-end Developer
https://github.com/NoahKKA/Nails-Website.git
- **Overview of the Project:** Designed a website for an entrepreneur running a nail salon business.
- **Description of the Project:** On the website, customers can choose from a variety of nail services offered by the salon. Customers can browse available time slots and schedule appointments for nail salon services. The website provides customers with full management of their appointments including automated email notifications to confirm their appointments, reminders of their appointments, and allowing for cancellations.
- **Technologies Used: HTML, CSS, JavaScript, SupaBase, Sequelize**
